## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-4, 6, 8-16, 28-30, and 32-38 (renumbered 1-24) are allowed. The following is an examiner's statement of reasons for allowance:

As set forth in the previous office action, the prior art references of record fail to suggest the use of the claimed elongate composite element as reinforcement in the belt or additional reinforcement layer/ply beneath the tread. In this instance, the closest prior art of record is Igarashi (JP 04185511, of record), which teaches the specific use of the claimed elongate composite element in the manufacture of a bead reinforcement assembly- without any suggestion from Igarashi, one of ordinary skill in the art at the time of the invention would not have found it obvious to use said elongate composite element in a different reinforcement structure beneath the tread. In particular, the reinforcing elements in the respective regions do not have the same characteristics due to the difference in stresses experienced during running. Furthermore, while additional references (e.g. Takahashi JP 05269889, of record) teach the use of an elongate composite element in the belt, the relevant references fail to suggest, disclose, or teach the specific elongate composite element of the claimed invention (type of fiber and resin and specific characteristics/properties). Thus, one of ordinary skill in the art at the time of the invention would not have found it obvious to form a tire in which the claimed elongate composite element is included in a reinforcement ply/layer located beneath the tread.
